in full or part sun*

Container Gardening Tips

Drainage - Always check for drainage holes before purchasing or planting a new container.

Potting - Fill the container 3/4 of the way with a peat-based soil. Arrange plants and fill empty spaces with remaining soil.

Fertilizer - If using a liquid nitrogen-based or organic-based fertilizer we recommend weekly applications. If using a control released or granular then apply monthly.

Water - Feel the soil, if it is dry 3 inches below the surface water thoroughly.
